Tennant T7 AMR Software 3.11 Update

3.11 Update Highlights

- **Improvements to T7AMR**

  - We are making some changes to how your T7AMR operates in the next machine update. The updated software will lead to smoother operating behavior. You may notice a difference in how quickly the machine accelerates and coasts to a stop in manual mode. However, we believe that after a short amount of time an operator will get used to and enjoy the smoother machine operation.

  - We recommend letting your team members know about these changes so that they are prepared for when the machines are updated.

Additional Improvements

- Operating system upgrade to accommodate security requirements. This update enhances our security framework, ensuring your operations are safer and more protected

- Our Steering Assist and Traction Encoder Error now come with updated instructions. These enhancements ensure quick and efficient error resolution with actionable steps to resolve errors, leading to less downtime and a smoother operation.
