

X4 ROVR

Clean 1.4 Release Highlights

September 24, 2024

1.4 Update Highlights

- **New Features**

- New User Interface Update Screen
- Cleaning During Start Replans

- **Improvements**

- Area Fill Improvements
- Enhanced Learning Center Video Controls
- More Accurate Autonomy Path Visualization

New User Interface Update Screen

Increase awareness of software update in progress

- In our 1.3 patch release, we've introduced a new firmware update screen on the robot's that clearly indicates when an update is in progress.

Cleaning During Short Replans

Maintain consistent clean during short replans

- The robot now keeps the scrub deck lowered during short replans* to help maintain a more consistent clean.

*A short replan is defined as any replan where the path adjustment is less than 2 meters.

Area Fill Improvements

Thoroughly clean with area fill enhancements

- Significant enhancements have been made to the Area Fill feature for better overall coverage
- This means your robot will deliver an even more thorough clean, covering every inch of the area with precision.

Enhanced Learning Center Video Controls

Easily navigate training on-board training content

- We've added the ability to skip forward or backward when playing videos in the Learning Center.
- This new control makes it easier for operators to navigate through training content and quickly access the information they need.

More Accurate Autonomy Path Visualization

View full robot width onboard robot user interface

- The robot's autonomy path visualization has been enhanced to reflect the full robot width on the user interface, eliminating the artificial “gaps” that were previously displayed
- This provides a more accurate representation of the areas the robot has cleaned.

Thank You!
