

## GLOBAL SPECTRUM WELLS FARGO CENTER RELIES ON ORBIO® SPLIT STREAM TECHNOLOGY

A Philadelphia-based sports and entertainment firm, Global Spectrum, a subsidiary of Comcast-Spectacor, is a leader in the sports management industry providing high quality sports and entertainment to millions of fans across the country. The company owns the Philadelphia Flyers of the National Hockey League. Global Spectrum operates the home of the Flyers – the Wells Fargo Center (formerly Wachovia Center) – and is one of the fastest growing firms in the public assembly management field. Wells Fargo Center annually hosts three million visitors at more than 300 events.

To keep the 850,000 square foot Wells Fargo Center looking beautiful every day, cleaning crews rely on Orbio Split Stream technology. Available in the Orbio 5000-Sc, the technology generates cleaning solution on-site that replaces many daily-use conventional cleaning chemicals.

### IMPRESSIVE CLEAN

“We have 150 cleaners and run a 24-hour cleaning operation,” said Tom Dillulio, Director of Building Services for Global Spectrum, and a 20-year veteran in the cleaning industry. “It’s very important to have a clean building for our guests. We regularly bring in prospective customers to see how good the building looks, and they can’t believe it’s 15 years old.”

*“I look for a consistently clean building and Orbio® 5000-Sc solution is consistent. There’s no need to mix it, you can’t over- or under-use it like chemical cleaners.”*

— Tom Dillulio, Director of Building Services for Global Spectrum

Orbio 5000-Sc is used in place of a glass cleaner, a floor cleaner, and an all-purpose degreaser to clean Wells Fargo Center's glass-sided escalators and hand rails, floors, stainless steel, countertops and carpets. Crews also keep the floors looking great by using the solution in a variety of Tennant equipment, including two walk-behind scrubbers, two rider scrubbers and four carpet extractors.

"We've used Orbio 5000-Sc solution on the carpets, and it did a great job removing the chemical build up," said Dillulio. "We're always interested in finding new ways to clean really well, and products that are capable of doing a good job."

## CONSISTENT AND LONG LIFE

Although Dillulio is always looking to improve productivity, he stressed that Wells Fargo Center is not a test site. He wants proven products, and Orbio Split Stream technology meets his needs. Dillulio has looked at other environmentally-preferred products, but they didn't have the shelf life the Orbio 5000-Sc solution has. He appreciates that the solution lasts a long time, while some other products they have tried lose their effectiveness in about 15 minutes.

The biggest benefit the solution provides Dillulio is a 40 percent savings compared to the glass, stainless steel and carpet cleaners he previously purchased. Consistency and sustainability are also major benefits.

"I look for a consistently clean building and Orbio 5000-Sc solution is consistent. There's no need to mix it, you can't over - or under - use it like chemical cleaners - it's consistent all the time. Just fill up a bottle and go," said Dillulio. "I don't want to confuse my workers, and now we have just one bottle on the carts instead of four individually-labeled bottles. It simplifies their daily tasks."

## SUSTAINABLE, BREAKTHROUGH TECHNOLOGY

Dillulio appreciates the environmental advantages the Orbio 5000-Sc solution provides. By replacing his conventional daily-use cleaning chemicals with the 5000-Sc solution, he knows there is a significant reduction in the environmental footprint compared to the packaged chemicals. Dillulio also knows that environmentally friendly products may not always be as potent, so he appreciates how well the solution cleans.

"The ability to be successful is the ability to change, and this industry is resistant to change," said Dillulio. "We're really interested to see the next new, inventive technology Tennant comes out with."

## ORBIO® SPLIT STREAM TECHNOLOGY

Through the process of electrolysis, the Orbio 5000-Sc creates a multi-purpose cleaning solution on site using tap water, salt, and electricity. The 5000-Sc solution effectively replaces many conventional daily-use cleaning chemicals.
