INTRODUCTION

This manual is furnished with each new model. It provides necessary operation and maintenance instructions.

Read this manual completely and understand the machine before operating or servicing it.

This machine will provide excellent service. However, the best results will be obtained at minimum costs if:

- The machine is operated with reasonable care.
- The machine is maintained regularly - per the machine maintenance instructions provided.
- The machine is maintained with manufacturer supplied or equivalent parts.

INTENDED USE

The T20 is an industrial rider machine designed to scrub hard surfaces (concrete, asphalt, stone, synthetic, etc). Typical applications include industrial warehouses, manufacturing facilities, distribution facilities, stadiums, arenas, convention centers, parking facilities, transportation terminals, and construction sites. Do not use this machine on soil, grass, artificial turf, or carpeted surfaces. Do not use where excessive debris is present such as leaves, paper, etc. This machine can be used both indoors and outdoors, but ensure there is adequate ventilation if used indoors. This machine is not intended for use on public roadways. Do not use this machine other than described in this Operator Manual.

IMPORTANT SAFETY INSTRUCTIONS – SAVE THESE INSTRUCTIONS

The following precautions are used throughout this manual as indicated in their description:

WARNING: To warn of hazards or unsafe practices that could result in severe personal injury or death.

CAUTION: To warn of unsafe practices that could result in minor or moderate personal injury.

FOR SAFETY: To identify actions that must be followed for safe operation of equipment.

The following information signals potentially dangerous conditions to the operator. Know when these conditions can exist. Locate all safety devices on the machine. Report machine damage or faulty operation immediately.

WARNING: Flammable materials can cause an explosion or fire. Do not use flammable materials in tank.

WARNING: Flammable materials or reactive metals can cause an explosion or fire. Do not pickup.

WARNING: Moving belt and fan. Keep away.

WARNING: Engine emits toxic gases. Serious injury or death can result. Provide adequate ventilation.

WARNING: Burn hazard. Hot surface. Do NOT touch.

CAUTION: LPG engine will run for a few seconds after key is turned off. Apply parking brake before leaving machine.

WARNING: This machine contains chemicals known to the State of California to cause cancer, birth defects, or other reproductive harm.

This machine may be equipped with technology that automatically communicates over the cellular network. If this machine will be operated where cell phone use is restricted because of concerns related to equipment interference, please contact a Tennant representative for information on how to disable the cellular communication functionality.

FOR SAFETY:

1. Do not operate machine:
   - Unless trained and authorized.
   - Unless operator manual is read and understood.
   - Unless mentally and physically capable of following machine instructions.
   - If it is not in proper operating condition.
   - In areas where flammable vapors/liquids or combustible dusts are present.
   - In areas that are too dark to safely see the controls or operate the machine unless operating / headlights are turned on.
   - In areas with possible falling objects unless equipped with overhead guard.

2. Before starting machine:
   - Check for fuel, oil, and liquid leaks.
   - Keep sparks and open flame away from refueling area.
   - Make sure all safety devices are in place and operate properly.
   - Check brakes and steering for proper operation.
   - Adjust seat and fasten seat belt.

3. When starting machine:
   - Keep foot on brake and directional pedal in neutral.
SAFETY PRECAUTIONS

4. When using machine:
   - Use only as described in this manual.
   - Use brakes to stop machine.
   - Go slow on inclines and slippery surfaces.
   - Reduce speed when turning.
   - Keep all parts of body inside operator station while machine is moving.
   - Use care when reversing machine.
   - Never allow children to play on or around machine.
   - Do not carry passengers on machine.
   - Always follow safety and traffic rules.
   - Report machine damage or faulty operation immediately.
   - Follow mixing, handling and disposal instructions on chemical containers.
   - Follow safety guidelines concerning wet floors.

5. Before leaving or servicing machine:
   - Do not park near combustible materials, dusts, gases, or liquids.
   - Stop on level surface.
   - Set parking brake.
   - Turn off machine and remove key.

6. When servicing machine:
   - All work must be done with sufficient lighting and visibility.
   - Avoid moving parts. Do not wear loose clothing, jewelry and secure long hair.
   - Block machine tires before jacking machine up.
   - Jack machine up at designated locations only. Support machine with jack stands.
   - Use hoist or jack that will support the weight of the machine.
   - Do not power spray or hose off machine near electrical components.
   - Disconnect battery connections before working on machine.
   - Avoid contact with battery acid.
   - Avoid contact with hot engine coolant.
   - Do not remove cap from radiator when engine is hot.
   - Allow engine to cool.
   - Keep flames and sparks away from fuel system service area. Keep area well ventilated.
   - Use cardboard to locate leaking hydraulic fluid under pressure.
   - All repairs must be performed by a trained service mechanic.
   - Do not modify the machine from its original design.
   - Use Tennant supplied or approved replacement parts.
   - Wear personal protective equipment as needed and where recommended in this manual.

For Safety: wear hearing protection.

For Safety: wear protective gloves.

For Safety: wear eye protection.

For Safety: wear protective dust mask.

7. When loading/unloading machine onto/off truck or trailer:
   - Drain tanks before loading machine.
   - Lower scrub head and squeegee before tying down machine.
   - Turn off machine and remove key.
   - Use ramp, truck or trailer that will support the weight of the machine and operator.
   - Use winch. Do not drive the machine onto/off the truck or trailer unless the load height is 380 mm (15 in) or less from the ground.
   - Set parking brake after machine is loaded.
   - Block machine tires.
   - Tie machine down to truck or trailer.
The following safety labels are mounted on the machine in the locations indicated. If these or any labels become damaged or illegible, install a new label in its place.

**EMISSIONS LABEL** – Located on the side of the operator compartment.

**FLAMMABLE SPILLS LABEL** – Located on the side of the operator compartment.

**FOR SAFETY LABEL** – Located on the side of the operator compartment.

**LPG ENGINE LABEL** – Located next to the ignition switch on the instrument panel. (LPG machines only)
SAFETY PRECAUTIONS

FAN AND BELT LABEL – Located on engine compartment panel.

FLAMMABLE MATERIALS LABEL – Located next to the solution tank covers and on the detergent tank.

HOT SURFACE LABEL – Located on the side of the bumper, on the exhaust shield, on the hydraulic reservoir, and on the scrub head (disk head machines only).
A. Overhead guard (option)  
B. Instrument panel  
C. Front shroud  
D. Headlights

OPERATION

SYMBOL DEFINITIONS

These symbols are used on the machine to identify controls, displays, and features.

- **Hazard light**
- **Operating lights**
- **Spray nozzle**
- **Fault indicator**
- **Scrub vac fan/squeegee**
- **1–STEP scrub**
- **ES (extended scrub)**
- **FaST (foam scrubbing)**
- **Engine speed**
- **Side brush**
- **Unleaded fuel only**
- **ec–H2O (option)**

- **Main brush pressure**
- **Solution flow**
- **Increase**
- **Decrease**
- **Charging system**
- **Engine oil pressure (000000–001997)**
- **Engine oil pressure (001998–)**
- **Check engine**
- **Horn**
- **Jack point**
- **Parking Brake (001998–)**
OPERATION OF CONTROLS

CHARGING SYSTEM INDICATOR

The Charging system indicator comes on when the alternator is not operating within the normal range. If this indicator comes on, stop the machine immediately and correct the problem.

ENGINE OIL PRESSURE INDICATOR

The Engine oil pressure indicator comes on when the engine oil pressure falls below the normal operating pressure. If this indicator comes on, stop the machine immediately and correct the problem.

CHECK ENGINE INDICATOR

The Check engine indicator comes on when the engine control system detects a fault during machine operation.

If this indicator comes on, contact a Tennant service representative.

PARKING BRAKE INDICATOR (OPTION)

The parking brake indicator comes on when the parking brake is engaged.
SETTING THE ENGINE SPEED

The engine speed is controlled automatically when the 1–STEP Scrub button is pressed. When not scrubbing, press the Engine Speed button to increase the engine RPM for increased travel speed. Press the Engine Speed button again to reduce the engine RPM. The two lights above the button indicate engine speed setting. When one light is lit the engine is in the low setting. When two lights are lit the engine is in the high setting.

FUEL INDICATOR

GASOLINE MACHINES

For gasoline machines, the Fuel indicator displays the amount of fuel left in the tank. The fault indicator will flash and a low fuel message will appear when the tank is near empty.

NOTE: Do not use leaded fuels. Leaded fuels will permanently damage the system oxygen sensor and catalytic converter.

LPG MACHINES

For LPG machines, the Fuel indicator does NOT display the amount of fuel in the LPG tank. It will display all the indicator bars to show that some fuel is in the tank. When the LPG tank is near empty, the fault indicator will flash and a low fuel message will appear.

The LPG fuel gauge on the tank displays the amount of fuel in the LPG tank.

SIDE BRUSH (OPTION)

The side brush allows users to scrub difficult to reach corners and areas near walls. The side brush also widens the scrubbing path.

With the 1–STEP Scrub button activated, press the Side brush button to lower and start the side brush. The light next to the button will come on. When finished using the side brush, press the button again to raise and stop the side brush. The light next to the button will turn off. The machine will default to the last setting used when it is powered on or off.
**HOUR METER**

The *Hour meter* records the hours the machine was operated. Use this information to determine machine service intervals.

**SUPERVISOR CONTROL BUTTONS**

The *Supervisor Control buttons* are for accessing the configuration and diagnostic modes. Only properly trained service personnel and TENNANT representatives should access these modes.

**OPERATING LIGHTS**

Push the top of the *Operating / hazard light switch* to turn on the headlights and taillights. Return the light switch to the center position to turn off the lights.

**HAZARD LIGHT (OPTION)**

Press the bottom of the *Operating / hazard light switch* to turn on the hazard light, headlights, and taillights. Return the light switch to the center position to turn off the lights.
OPERATOR SEAT

The operator seat has three adjustments: backrest angle, operator weight, and front to back.

The backrest adjustment knob adjusts the angle of the backrest.

Increase angle: Turn the angle adjustment knob counterclockwise.

Decrease angle: Turn the angle adjustment knob clockwise.

The weight adjustment knob controls the firmness of the operator seat.

Increase firmness: Turn the weight adjustment knob clockwise.

Decrease firmness: Turn the weight adjustment knob counterclockwise.

Use the gauge next to the weight adjustment knob to help determine seat firmness for the operator.

The front-to-back adjustment lever adjusts the seat position.

Adjust: Pull the lever out and slide the seat to the desired position. Release the lever to lock the seat into place.

SEAT BELTS

Always fasten and adjust the seat belts before operating the machine.

STEERING COLUMN TILT KNOB

1. Pull the Steering column tilt knob and adjust the steering column to the desired height.

2. Release the Steering column tilt handle.
**BRAKE PEDAL**
Press the *Brake pedal* to stop the machine.

**PARKING BRAKE PEDAL**
Press the *Brake pedal* down as far as possible and use toe to lock the *Parking brake pedal* into place. Press the *Brake pedal* to release the parking brake. The *Parking brake pedal* will return to the unlocked position.

**DIRECTIONAL PEDAL**
Press the top of the *Directional pedal* to move forward and the bottom of the pedal to move backward. The backup lights will come on when the machine is in reverse. The pedal returns to the neutral position when it is released.

**NOTE:** An audible alarm will sound and the backup light will flash when backing the machine if equipped with the optional backup alarm.

**SQUEEGEE PROTECTORS (OPTION)**
The rear and side squeegee protectors help protect the rear squeegee from being damaged.

To engage the rear squeegee protector, pull the pin, lower the protector bar, and reinset the pin.
HOW THE MACHINE WORKS

This machine can effectively scrub dirty floors. The 1–STEP Scrub button makes it possible to immediately begin scrubbing by operating all the scrubbing functions.

When in the conventional Scrub mode, a water and detergent mixture is used to scrub the floor.

When in the optional FaST (Foam scrubbing) mode, the FaST scrubbing system mixes the FaST–PAK concentrate with a small amount of water, creating a large volume of expanded wet foam. The FaST system can be used with all scrubbing applications.

When in the optional ES (Extended Scrub) mode, the dirty solution in the recovery tank is filtered through the ES system and returned to the solution tank for reuse. Detergent is then injected into the returned solution to revitalize the cleaning capability of the solution.

When in the optional ec–H2O (electrically converted water) mode, normal water passes through a module where it is oxygenated and charged with an electric current. The electrically converted water changes into a blended acidic and alkaline solution forming a neutral pH cleaner. The converted water attacks the dirt, breaks it into smaller particles, and pulls it off the floor surface allowing the machine to easily scrub away the suspended soil. The converted water then returns to normal water in the recovery tank. The ec–H2O system can be used while double scrubbing.
BRUSH AND PAD INFORMATION

For best results, use the correct brush type for the cleaning application. Listed below are the brushes and the applications for which each is best suited.

NOTE: The amount and type of soilage play an important role in determining the type of brushes to use. Contact a Tennant representative for specific recommendations.

Nylon brush (Disk)* – Softer nylon bristles are recommended for scrubbing coated floors. Cleans without scuffing.

Polyester brush (Cylindrical) – Softer general purpose polyester bristles gently clean while scrubbing. Perfect for sensitive floor surfaces. Polyester does not absorb water so it is preferred over Nylon in wet applications.

PolyPro brush (Cylindrical) – Heavy duty polypropylene bristles provide a more aggressive cleaning performance and can more easily lift compacted dirt, debris, and sand while offering excellent scrubbing performance.

Polypropylene brush (Cylindrical and Disk)* – General purpose polypropylene bristles lift lightly compacted dirt without scuffing high-gloss coated floors.

Super AB brush (Cylindrical and Disk)* – Nylon fiber impregnated with abrasive grit to remove stains and compacted dirt. Aggressive action on any surface. Performs well on buildup, grease, or tire marks.

* This brush is also available for the side brush.

Stripping pad – This brown pad is for stripping floors. Quickly and easily cuts through old finish to prepare the floor for recoating.

Scrubbing pad – This blue pad is for scrubbing floors. Removes dirt, spills, and scuffs. Leaves a clean surface ready for re-coating.

Buffing pad – This red pad is for buffing floors. Quickly cleans and removes scuff marks while polishing the floor to a high gloss.

Polishing pad – This white pad is for polishing floors. Maintains a high gloss. Use for buffing very soft finishes and lower traffic areas, and polishing soft waxes on wood floors.

High productivity pad – This black pad is for aggressively stripping floor finishes/sealers or for very heavy-duty scrubbing. This pad can only be used with the grip pad driver, not the tufted pad driver.

Surface preparation pad – This maroon pad is for very aggressive floor stripping without chemicals.

Grip pad driver – The grip-face backing allows pads to be fully used and holds pads in place without penetrating the pad. The spring-activated centering device works with all Tennant pads and allows for fast, easy pad replacement.

Tufted pad driver – Standard pad driver has short bristles, or “tufts,” on the back to hold the pad in place. This driver works with all Tennant pads except the black high productivity pad.
WHILE OPERATING THE MACHINE

Pick up oversized debris before scrubbing. Pick up wire, string, plastic wrap, twine, large pieces of wood, or any other debris that could become wrapped around or tangled in the brushes. Do not use where excessive debris is present such as leaves, paper, etc.

Drive as straight a path as possible. Avoid bumping into posts or scraping the sides of the machine. Overlap the scrub paths by several centimeters (a few inches).

Avoid turning the steering wheel too sharply when the machine is in motion. The machine is very responsive to the movement of the steering wheel. Avoid sudden turns, except in emergencies.

Adjust the machine speed, brush pressure, and solution flow as required when scrubbing. Use the lowest brush pressure and solution flow settings for best performance. If the machine is equipped with the FaST or ec–H20 system, use the FaST or ec–H20 system for the best scrubbing results.

Keep the machine moving to prevent damaging floor finishes.

If poor cleaning performance is observed, stop cleaning and refer to MACHINE TROUBLESHOOTING in this manual.

Perform the Daily Maintenance Procedures after each use (see MACHINE MAINTENANCE in this manual).

Drive the machine slowly on inclines. Use the brake pedal to control machine speed on descending inclines. Scrub with the machine up inclines rather than down inclines.

FOR SAFETY: When using machine, go slowly on inclines and slippery surfaces.

Do not operate machine in areas where the ambient temperature is above 43° C (110° F). Do not operate scrubbing functions in areas where the ambient temperature is below freezing 0° C (32° F).

The maximum rated incline for scrubbing with the machine is 14%. The maximum rated incline during transport of the machine is 18%.
PRE-OPERATION CHECKLIST

☐ Check the hydraulic fluid level.

☐ Check the fuel level.

☐ Check the machine for fluid leaks.

☐ Check the condition of the main brushes. Remove string, banding, plastic wrap, or other debris wrapped around the brushes.

☐ Cylindrical brushes: Check that the debris tray is empty and clean.

☐ Check the main brush compartment right skirts, seals, and squeegee for damage and wear.

☐ Side Brush Option: Check the condition of the brush. Remove string, banding, plastic wrap, or other debris wrapped around the brush.

☐ Side Brush Option: Check the condition of the side brush squeegee.

☐ Check the radiator and hydraulic cooler fins for debris.

☐ Check the engine coolant level.

☐ Check the engine oil level.

☐ Check the main brush compartment left skirts, seals, and squeegee for damage and wear.

☐ Check the left solution tank cover seal for damage and wear.

☐ Check the recovery tank cover seal for damage and wear.

☐ Clean the vacuum fan debris filter.

☐ Drain and clean the recovery tank.

☐ ES Option: Drain and clean the solution tank, float sensor, and ES filter.

☐ Check the right solution tank cover seal for damage and wear.

☐ Check the squeegee hose for debris or blockage.

☐ Check the squeegees for damage, wear, and deflection adjustment.

☐ FaST Scrubbing: Check the FaST–PAK concentrate agent level. Replace carton as needed. See the INSTALLING THE FaST–PAK CARTON section of the manual.

☐ FaST Scrubbing: Ensure all conventional cleaning agents are drained and rinsed from the solution tank.

☐ FaST Scrubbing: Ensure the solution tank is filled with clear cool water only.

☐ Check the headlights, taillights, and safety lights.

☐ Check the brakes and steering for proper operation.

☐ Check the service records to determine maintenance requirements.
OPERATION

CHANGING THE LPG TANK

FOR SAFETY: Before leaving or servicing machine, stop on level surface, set parking brake, turn off machine, and remove key.

1. Open the side access door.

2. Close the LPG tank service valve.

3. Start the machine and operate the engine until it stops from lack of fuel. Turn off the machine.

4. Lift the operator seat open and engage the seat latch so the seat remains open.

FOR SAFETY: When servicing machine, keep flames and sparks away from fuel system service area. Keep area well ventilated.

5. Put on gloves and remove the quick disconnect tank coupling.

6. Disengage the mounting strap and remove the empty LPG fuel tank.

7. Align the hole in the tank collar with the centering pin and carefully place the full LPG tank onto the tray. Secure the tank with mounting strap.

8. Connect the LPG fuel line to the tank service coupling. Make sure the tank service coupling is clean and undamaged and that it matches the fuel line coupling.

9. Slowly open the tank service valve and check for leaks. If a leak is found, immediately close the service valve and inform the appropriate personnel.
STARTING THE MACHINE

1. LPG powered machines: Slowly open the liquid service valve.

   NOTE: Opening the service valve too quickly may cause the service check valve to stop the flow of LPG fuel. If the check valve stops the fuel flow, close the service valve, wait a few seconds, and slowly open the valve again.

2. Sit in the operator seat and press the brake pedal or set the parking brake.

   FOR SAFETY: When starting machine, keep foot on brake and directional pedal in neutral.

3. Turn the ignition switch key until the engine starts.

   NOTE: Do not operate the starter motor for more than 10 seconds at a time or after the engine has started. Allow the starter to cool 15–20 seconds between starting attempts or damage to the starter motor may occur.

4. Allow the engine and hydraulic system to warm up for three to five minutes.

   WARNING: Engine emits toxic gases. Severe respiratory damage or asphyxiation can result. Provide adequate ventilation. Consult with your regulatory authorities for exposure limits. Keep engine properly tuned.

5. Turn on lights.

TURNING OFF THE MACHINE

1. Stop the machine and turn off all scrubbing functions.

2. Turn the ignition switch key counter clockwise to turn off the machine. Remain in the operator seat until the engine is off.

   CAUTION: LPG engine will run for a few seconds after key is turned off. Apply parking brake before leaving machine.

   NOTE: To protect engine emission components on LPG powered machines, the engine will continue to operate for a few seconds after the ignition switch is turned off.

   FOR SAFETY: Before leaving or servicing machine, do not park near combustible materials, dust, gases, or liquids. Stop on level surface, set parking brake, turn off machine, and remove key.
FILLING THE SOLUTION TANK

FOAM SCRUBBING (FaST MODE) / ec–H2O SCRUBBING (ec–H2O MODE)

FOR SAFETY: Before leaving or servicing machine, stop on level surface, set parking brake, turn off machine, and remove key.

1. Open either the left or right solution tank fill cover.

2. Fill the solution tank with only clean COOL WATER (less than 21°C / 70°F). DO NOT use hot water or add any conventional floor cleaning detergents or FaST system failure may result.

WARNING: Flammable materials can cause an explosion or fire. Do not use flammable materials in tank(s).

NOTE: To install or change the FaST-PAK carton, see the REPLACING THE FaST-PAK CARTON section of the manual.

CONVENTIONAL SCRUBBING MODE

FOR SAFETY: Before leaving or servicing machine, stop on level surface, set parking brake, turn off machine, and remove key.

1. Open either the left or right solution tank fill cover.

2. Partially fill solution tank with water (not to exceed 60°C / 140°F). Pour the required amount of detergent into the solution tank. Fill the solution tank with water until the level is just below the indicator tab.

WARNING: Flammable materials can cause an explosion or fire. Do not use flammable materials in tank(s).

ATTENTION: For Conventional Scrubbing, only use recommended cleaning detergents. Machine damage due to improper detergent usage will void the manufacturer’s warranty.

NOTE: Pour a recommended foam control solution into the recovery tank if excessive foam appears. For specific detergent recommendations, contact a TENNANT representative.

NOTE: Do not use the FaST or ec–H2O system when there are conventional cleaning detergents in the solution tank. Drain, rinse, and refill the solution tank with clear cool water before operating the FaST or ec–H2O system. Conventional cleaning detergents may cause a FaST or ec–H2O system failure.
ES (EXTENDED SCRUB) MODE WITH AUTO–FILL

FOR SAFETY: Before leaving or servicing machine, stop on level surface, set parking brake, and turn off machine.

1. Connect the hose from the water source (not to exceed 60°C / 140°F) to the auto–fill connection.

2. Turn the ignition switch to the on position (without starting) and turn on the water source. The auto–fill automatically fills the tanks to the proper level.

3. Fill the detergent tank with the proper detergent.

ATTENTION: For ES Scrubbing, only use recommended low–foaming cleaning detergents. Machine damage due to the use of improper detergent will void the manufacturer’s warranty.

ES (EXTENDED SCRUB) MODE – MANUALLY FILLING TANK

FOR SAFETY: Before leaving or servicing machine, stop on level surface, set parking brake, and turn off machine.

1. Open either the left or right solution tank cover and fill the solution tank with water (not to exceed 60°C / 140°F) until the level is just below the indicator tab.

2. Open the recovery tank cover and fill the recovery tank with water (not to exceed 60°C / 140°F) until the recovery tank is approximately half full.

WARNING: Flammable materials can cause an explosion or fire. Do not use flammable materials in tank(s).
SETTING SCRUB MODES

Before scrubbing, determine which scrub mode will be used (FaST, ES or conventional). Then set the scrub brush pressure and adjust the solution flow levels.

SETTING FaST MODE

The FaST button enables the FaST system to come on when the 1–STEP Scrub button is activated. The light next to the button will come on. The machine will default to the last setting used when it is powered on or off.

SETTING ES (EXTENDED SCRUB) MODE

The ES button enables the ES system to come on when the 1–STEP Scrub button is activated. The light next to the button will come on. The machine will default to the last setting used when it is powered on or off.

NOTE: When the ES system is turned on there is a slight delay before the ES pump begins operating.

SETTING ec–H2O MODE

The ec–H2O button enables the ec–H2O system to come on when the 1–STEP Scrub button is activated. The light next to the button will come on. The machine will default to the last setting used when it is powered on or off.

NOTE: Storage or transporting machines equipped with ec–H2O in freezing temperatures requires special procedures. Follow the freeze protection procedure located in the STORAGE INFORMATION section.

SETTING BRUSH PRESSURE

Under normal cleaning conditions, the brush pressure should be set to the minimum setting (the bottom light). Under heavy grime conditions, the brush pressure can be set to a higher setting. Travel speed and floor conditions will affect cleaning performance.

With the 1–STEP Scrub button activated, press either the Brush Pressure increase button (+) or the Brush Pressure decrease button (−) to set the brush pressure for the surface being cleaned. If brushes are worn, it may be necessary to increase the brush pressure. The machine will default to the last setting used when it is powered on or off.
SETTING SOLUTION FLOW

With the 1-STEP Scrub button activated, press either Solution increase button (+) or Solution decrease button (−) to set the solution flow level. Travel speed and floor conditions will affect scrubbing performance. The machine will default to the last setting used when the machine is powered on or off.

**NOTE:** In the ES and FaST modes, the solution flow buttons control both the solution AND detergent flow levels.

To turn off all solution and detergent flow, press the Solution decrease button (−) until all indicator lights are off.

CONVENTIONAL, FaST, AND ec−H2O SOLUTION FLOW

Under normal soilage conditions the solution flow level should be set to the lowest setting (the bottom light). Under heavy grime conditions, the solution flow level should be set to the higher settings (middle or top lights).

ES (EXTENDED SCRUB) SOLUTION FLOW

*For ES machines, the detergent flow is turned off when the solution flow is in the lowest setting (one light).* Under normal soilage conditions, the solution flow level should be alternated between the middle and lowest setting. The middle setting (two lights) allows solution AND detergent flow. The lowest setting (one light) allows solution flow WITHOUT adding detergent. Detergent does not have to be continuously added with the solution flow to attain effective scrubbing results.
OPERATION

SCRUBBING

The 1–STEP Scrub button operates all the scrubbing functions.

FOR SAFETY: Do not operate machine, unless operator manual is read and understood.

1. Start the machine.

NOTE: Make sure the scrub modes / settings are set before scrubbing.

2. Press the 1–STEP Scrub button. The light on the button will come on. All the preset scrubbing functions will turn on.

NOTE: DO NOT turn on the FaST or ec–H2O system during conventional scrubbing. Conventional cleaning detergents could cause a FaST or ec–H2O system failure. Drain, rinse, and refill the solution tank with cool clean water before operating the FaST or ec–H2O system.

3. Release the parking brake, then press the Directional pedal to begin scrubbing.

WARNING: Flammable materials or reactive metals can cause an explosion or fire. Do not pick up.

FOR SAFETY: When using machine, go slow on inclines and slippery surfaces.

NOTE: The squeegee automatically rises when the machine is driven backwards. This prevents damaging the squeegee.

NOTE: The ec–H2O system indicator light will not turn on until the machine starts scrubbing.

ec–H2O Model: If an alarm sounds and the ec–H2O system indicator light begins to blink red, the ec–H2O module must be flushed to resume ec–H2O operation (See ec–H2O MODULE FLUSH PROCEDURE).

NOTE: When the alarm sounds and the light blinks red, the machine will bypass the ec–H2O system. To continue scrubbing, press the ec–H2O button to turn off the ec–H2O system.

ATTENTION: (ec–H2O model) Do not allow solution tank to run dry. ec–H2O module failure may result if operated without water for an extended period.

<table>
<thead>
<tr>
<th>ec–H2O SYSTEM INDICATOR LIGHT CODE</th>
<th>CONDITION</th>

<td>Solid green</td>
<td>Normal operation</td>
</tr>
<tr>
<td>Blinking red</td>
<td>Flush ec–H2O module</td>
</tr>
<tr>
<td>Solid red</td>
<td>Contact Service Center</td>
</tr>
</tbody>
</table>

4. Release the directional pedal and press the brake pedal to stop the machine.

5. Press the 1–STEP Scrub button to stop scrubbing. The light next to the button will go off and scrubbing functions will stop after a short delay.
DOUBBLE SCRUBBING

For heavily soiled areas, use the double scrubbing method.

Double scrubbing can be performed using the FaST SCRUBBING SYSTEM (option), ec–H2O SCRUBBING SYSTEM (option) or CONVENTIONAL SCRUBBING methods.

Side brush option (S/N 000000–002115): Before double scrubbing, manually lock the side brush squeegee into the raised position. Pull the pin from the side brush squeegee bracket, manually raise the side squeegee to the upper position, then reinsert the brush pin.

FOR SAFETY: When using machine, go slow on inclines and slippery surfaces.

Let the cleaning solution soak on the floor for 5–15 minutes. Then place the side squeegee into the lower position and lock into place with the pin.

Press the Scrub vacuum fan/squeegee button again to lower the squeegee and turn on the vacuum fan. The light above the button will come on. Scrub the floor a second time to pick up the cleaning solution.

WARNING: Flammable materials or reactive metals can cause an explosion or fire. Do not pick up.

NOTE: To turn off the solution flow when scrubbing the area a second time, repeatedly press the Solution decrease button (−) until all lights above the button are off.

NOTE: Double scrubbing is not recommended in areas where the cleaning solution will run under racks or damage products.

Side brush option (S/N 002116–): Before double scrubbing, remove the side brush bumper. Pull the pins and remove the squeegee bumper.

Press the 1–STEP Scrub button, and then the Scrub vacuum fan/squeegee button. The light above the Scrub vacuum fan/squeegee button will turn off, the squeegee will rise, and the vacuum fan will stop operating. Scrub the heavily soiled area.
WATER PICKUP MODE (NO SCRUBBING)

The machine can be used to pick up water or non–flammable liquid spills without scrubbing.

To pick up water or non–flammable liquid spills, make sure the 1–STEP Scrub button is not activated. The light next to the button must be off.

WARNING: Flammable materials or reactive metals can cause an explosion or fire. Do not pick up.

Press the Scrub vacuum fan/squeegee button. The light above the button will come on, the squeegee will lower, and the vacuum fan will start operating. Pick up the water or non–flammable liquid spill.
EMPTYING AND CLEANING THE DEBRIS TRAY – CYLINDRICAL SCRUB HEADS ONLY

1. Drive the machine to a debris dump site.

FOR SAFETY: Before leaving or servicing machine, stop on level surface, set parking brake, turn off machine, and remove key.

2. Press the debris tray carriage release lever.

3. Pull the debris tray carriage open.

4. Pull the debris tray from the carriage.

5. Empty the contents from the debris tray.

6. Remove the debris screen from the debris tray.

7. Rinse the debris screen and the debris tray.
8. Disconnect the vacuum hose from the rear coupling.

9. Spray water through the port located inside the vacuum coupling to rinse debris from the debris tray coupling.

10. Reconnect the vacuum hose to the rear coupling.

11. Reinstall the debris screen into the debris tray.

12. Align the debris tray with the debris tray carriage, use the handle to guide the debris tray into the debris tray carriage, and slide the handle back into the debris tray.

13. Lift slightly on the debris tray carriage handle and push the debris tray carriage closed until it locks shut.
DRAINING AND CLEANING THE RECOVERY TANK

Drain and clean the recovery tank daily or when the recovery tank full indicator comes on.

Clean the outside of the recovery tank with vinyl cleaner.

FOR SAFETY: Before leaving or servicing machine, stop on level surface, set parking brake, turn off machine, and remove key.

DRAINING THE RECOVERY TANK WITH THE DRAIN HOSE

1. Lift the recovery tank cover.

2. Place the recovery tank drain hose nozzle next to a floor drain.

3. Open the recovery tank Variable Drain Valve.

4. Rinse dirt and debris down through the drain hole in the demister tray and flush the vacuum hose.

NOTE: DO NOT use steam to clean tanks. Excessive heat can damage tanks and components.

5. Remove the vacuum screen from the recovery tank and rinse the screen.
6. Rinse the float sensor.

7. ES machines: Rinse the ES filter. If necessary, remove the ES filter from the recovery tank.

8. Rinse dirt and debris towards the recovery tank drain. Allow the recovery tank to drain.

9. Close the recovery tank Variable Drain Valve.

10. Reinstall the recovery tank drain hose onto the back of the recovery tank and close the recovery tank cover.

DRAINING THE RECOVERY TANK WITH THE DRAIN PLUG

Use the drain plug to drain the recovery tank if the tank is draining slowly or if the drain hose is plugged.

1. Park the machine so the larger drain in the recovery tank is positioned over the disposal drain. Set the parking brake.

FOR SAFETY: Before leaving or servicing machine, stop on level surface, set parking brake, turn off machine, and remove key.

2. Machines equipped with cylindrical scrub heads only: To avoid water and debris from getting in the debris tray, open the debris carriage and remove the debris tray.
3. Lift the drain plug handle and remove the drain plug from the tank.

4. Open the recovery tank Variable Drain Valve.

5. Remove the recovery tank drain hose from the back of the recovery tank, then rinse the dirt and debris from the hose into the tank.

6. Rinse dirt and debris out the open drain.

7. Clean the drain hole, then reinsert the drain plug. Push the handle down to tighten. Be sure the drain plug is fully seated before tightening.

**NOTE:** If necessary, turn the handle clockwise for a tighter fit and counterclockwise for a looser fit.
8. Close the recovery tank Variable Drain Valve.

9. Reinstall the recovery tank drain hose onto the back of the recovery tank.

10. Machines equipped with cylindrical scrub heads only: Reinstall the debris tray into the debris tray carriage and close the carriage.

11. Close the recovery tank cover.

DRAINING AND CLEANING THE SOLUTION TANK

The solution tank on non-ES machines does not require regular maintenance. If deposits form on the bottom of the tank, rinse the tank with a strong blast of warm water.

The solution tank on machines with the ES option should be drained and cleaned daily.

Clean the outside of the solution tank with vinyl cleaner.

FOR SAFETY: Before leaving or servicing machine, stop on level surface, set parking brake, turn off machine, and remove key.

1. Open the solution tank cover(s).

2. Place the solution tank drain hose nozzle next to a floor drain.
3. Open the solution tank Variable Drain Valve.

4. Rinse the solution tank. Flush dirt and debris toward the solution tank drain.

5. Rinse the float sensor and the screen filter. Allow the solution tank to drain.

6. Close the solution tank Variable Drain Valve.

7. Reinstall the solution tank drain hose onto the back of the recovery tank.

8. Close the solution tank cover(s).
## FAULT INDICATOR(S)

This machine is equipped with two visual indicators, a red indicator light and an LCD (liquid crystal display).

The red indicator light will blink continuously indicating that a fault has occurred.

The LCD will display a fault code. If there is more than one fault, each fault will alternately display.

All faults are also accompanied by an audible alarm to alert the operator a fault has occurred.

To reset the fault indicators, turn the machine off, then eliminate the cause of the fault. The fault indicator will reset when the machine is restarted.

Refer to the table below to determine the cause and remedy for the fault.

<table>
<thead>
<tr>

</table>
OPTIONS

SPRAY NOZZLE (OPTION)

The spray nozzle is used to clean the machine and surrounding areas. The solution tank provides a water/solution supply for the spray nozzle. A wand is included with the spray nozzle.

NOTE: Do NOT get water on electronic components when using the spray nozzle to clean the machine.

FOR SAFETY: Before leaving or servicing machine, stop on level surface, set parking brake, and turn off machine.

1. Turn the key to the on position (without starting the machine).

NOTE: The spray nozzle can be operated while the engine is running, but it is recommended to turn the engine off while using the spray nozzle.

2. Press the top of the Spray nozzle switch to turn on the water supply. The light on the switch will come on when the spray nozzle is activated.

3. Remove the spray nozzle from the storage area and clean as required.

FOR SAFETY: When using pressurized air or water, wear eye protection.

4. If cleaning a hard to reach area, install the wand onto the spray nozzle.

5. Twist the off/on knob to turn on the wand.

6. When finished cleaning, place the spray nozzle and wand back into their storage locations.

7. Press the bottom of the Spray nozzle switch to turn off the water supply.
VACUUM WAND (OPTION)

FOR SAFETY: Before leaving or servicing machine, stop on level surface, set parking brake, turn off machine, and remove key.

1. Remove the vacuum wand sections and hose from the storage bag located on top the recovery tank cover.

2. Disconnect the vacuum hose from the rear coupling and attach the wand hose.

3. Assemble the wand and nozzle.

4. Start the machine.

**WARNING:** Engine emits toxic gases. Severe respiratory damage or asphyxiation can result. Provide adequate ventilation. Consult with your regulatory authorities for exposure limits. Keep engine properly tuned.

5. Verify that the 1–STEP <span class="highlight">Scrub</span> button is off. The light next to the button will be off.

6. Press the <span class="highlight">Scrub</span> vacuum fan/squeegee <span class="highlight">button</span>. The light above the button will turn on and the vacuum fan will start operating.

**NOTE:** The squeegee will lower.

7. Clean the spill or debris.

8. When finished vacuuming, press the <span class="highlight">Scrub</span> vacuum fan/squeegee button to turn off the vacuum. The light above the button will turn off.

9. Turn off the machine.

10. Disassemble the vacuum wand sections and hose and return them to the storage bag.

11. Reattach the vacuum hose to the rear coupling.
POWER WAND (OPTION)

The power wand uses both the vacuum and solution systems. The power wand allows the user to scrub floors that are out of reach of the machine.

FOR SAFETY: Before leaving or servicing machine, stop on level surface, set parking brake, turn off machine, and remove key.

1. Remove the power wand equipment from the storage bag on top the recovery tank cover.

2. Remove the squeegee suction hose from the top of the rear squeegee assembly.

3. Connect the vacuum wand hose and the squeegee vacuum hose with the adapter.

4. Attach the solution hose to the quick-disconnect fitting. Push the connector in until it stops. Pull on the hose to ensure it is connected.

5. Attach the other ends of the solution and vacuum hoses to the power wand.

6. Start the machine.

WARNING: Engine emits toxic gases. Severe respiratory damage or asphyxiation can result. Provide adequate ventilation. Consult with your regulatory authorities for exposure limits. Keep engine properly tuned.

7. Verify that the 1–STEP Scrub button is off. The light next to the button will be off.

8. Press the Scrub vacuum fan/squeegee button. The light above the button will turn on and the vacuum fan will start operating.

NOTE: The squeegee will also lower.
9. Press the top of the *Spray nozzle switch* to turn on the water supply.

10. Squeeze the solution lever on the power wand to spray solution onto the floor. Scrub the floor with the brush side of the cleaning tool.

11. Vacuum up the solution by turning over the cleaning tool so the squeegee side is down.

   If the cleaning tool is hard to push or is not picking up the solution very well, adjust the roller wheels on the tool by turning the black adjustment knob.

   **NOTE:** The wheels are properly adjusted when the squeegee blade deflects slightly while the cleaning tool is pushed back and forth.

12. When finished scrubbing, press the *Scrub vacuum fan/squeegee button* to turn off the vacuum and press the bottom of the *Spray nozzle switch* to turn off the water supply.

13. Turn off the machine.

14. Disconnect the power wand vacuum hose from the squeegee suction hose and the solution hose from the quick-disconnect fitting.

15. Reconnect the vacuum hose to the rear squeegee assembly.

16. Disassemble the power wand assembly and return it to the storage bag.

</tbody>
</table>

**NOTE:** Change the hydraulic fluid, filter, and suction strainer, indicated (*), after every 800 hours for machines NOT originally equipped with **TennantTrue** premium hydraulic fluid. (See Hydraulics section).

**LUBRICANT/FLUID**

EO . . . . Engine oil, 5W30 SAE−SG/SH only.
HYDO . **TennantTrue** premium hydraulic fluid or equivalent
WG . . . . Water and ethylene glycol anti-freeze, −34°C (−30°F)
SPL . . . . Special lubricant, Lubriplate EMB grease (Tennant part number 01433−1)

**NOTE:** More frequent maintenance intervals may be required in extremely dusty conditions.
LUBRICATION

FOR SAFETY: Before leaving or servicing machine, stop on level surface, set parking brake, turn off machine, and remove key.

ENGINE OIL

Check the engine oil level daily. Change the oil and oil filter after every 100 hours of operation.

Fill the engine with oil until the oil is between the indicator marks on the dipstick. DO NOT fill past the top indicator mark.

The engine oil capacity for GM engines (machines serial number 004999 and below) is 3.5 L (3.7 qt) with oil filter.

The engine oil capacity for Mitsubishi engines (machines serial number 005000 and above) is 4.7 L (5 qt) with oil filter.

SQUEEGEE CASTER BEARINGS

Lubricate the squeegee caster bearings after every 100 hours of operation.

FRONT WHEEL SUPPORT BEARING

Lubricate the front wheel support bearings after every 200 hours of operation. Both front wheel support grease fittings are located underneath the frame support plate.

STEERING CYLINDER BEARING

Lubricate the steering cylinder after every 200 hours of operation. The steering cylinder bearing is located next to the front wheel support.

REAR WHEEL BEARINGS

Inspect the rear wheel bearings for seal damage, and repack and adjust every 400 hours of operation. Use Lubriplate EMB grease (Tennant part number 01433−1).
TORQUE TUBES–CYLINDRICAL BRUSHES

Lubricate the torque tubes after every 200 hours of operation. The torque tube grease fittings on the operator side of the machine are located beneath the fuel tank.

On the other side of the machine the torque tube grease fittings are located beneath the propel pump.

TORQUE TUBES–DISK BRUSHES

Lubricate the three torque tube fittings after every 200 hours of operation. The first two fittings are located on each side of the machine and the third is located above the center brush.

PIVOT SHAFT–DISK BRUSHES

Lubricate the pivot shaft after every 200 hours of operation.
HYDRAULICS

FOR SAFETY: Before leaving or servicing machine, stop on level surface, set parking brake, turn off machine, and remove key.

Check the hydraulic fluid level at operating temperature daily. The hydraulic fluid level should be between the two lines on the hydraulic gauge.

ATTENTION! Do not overfill the hydraulic fluid reservoir or operate the machine with a low level of hydraulic fluid in the reservoir. Damage to the machine hydraulic system may result.

Drain and refill the hydraulic fluid reservoir with new TennantTrue premium hydraulic fluid after every 2400 hours of operation. Machines have a blue colored drop (left photo) on the hydraulic fluid label if originally equipped with TennantTrue premium hydraulic fluid.

⚠️ WARNING: Burn hazard. Hot surface. Do NOT touch.

Replace the filler cap after every 800 hours of operation. Apply a light film of hydraulic fluid onto the filler cap gasket before installing the cap onto the reservoir.

Replace the hydraulic fluid filter after every 1200 hours of operation or if the hydraulic reservoir gauge is in the yellow/red zone when the reservoir hydraulic fluid is approximately 32°C (90°F).

Replace the hydraulic strainer outlet after every 2400 hours of operation.
HYDRAULIC FLUID

There are three fluids available for different ambient air temperature ranges:

<table>
<thead>
<tr>
<th>Part Number</th>
<th>Capacity</th>
<th>ISO Grade</th>
<th>Viscosity Index (VI)</th>
<th>Ambient Air Temperature Ranges</th>
</tr>
</thead>
<tbody>
<tr>
<td>1057710</td>
<td>3.8 L (1 gal)</td>
<td>ISO 100 VI 126 or higher</td>
<td>19° C (65° F) or higher</td>
<td></td>
</tr>
<tr>
<td>1057711</td>
<td>19 L (5 gal)</td>
<td>ISO 68 VI 155 or higher</td>
<td>7 to 43° C (45 to 110° F)</td>
<td></td>
</tr>
<tr>
<td>1069019</td>
<td>3.8 L (1 gal)</td>
<td>ISO 32 VI 163 or higher</td>
<td>16° C (60° F) or lower</td>
<td></td>
</tr>
<tr>
<td>1069020</td>
<td>19 L (5 gal)</td>
<td>ISO 68 VI 155 or higher</td>
<td>7 to 43° C (45 to 110° F)</td>
<td></td>
</tr>
<tr>
<td>1057707</td>
<td>3.8 L (1 gal)</td>
<td>ISO 100 VI 126 or higher</td>
<td>19° C (65° F) or higher</td>
<td></td>
</tr>
<tr>
<td>1057708</td>
<td>19 L (5 gal)</td>
<td>ISO 68 VI 155 or higher</td>
<td>7 to 43° C (45 to 110° F)</td>
<td></td>
</tr>
</tbody>
</table>

If using a locally-available hydraulic fluid, be sure the specifications match Tennant hydraulic fluid specifications. Substitute fluids can cause premature failure of hydraulic components.

ATTENTION! Hydraulic components depend on system hydraulic fluid for internal lubrication. Malfunctions, accelerated wear, and damage will result if dirt or other contaminants enter the hydraulic system.

HYDRAULIC HOSES

Check the hydraulic hoses after every 800 hours of operation for wear or damage.

FOR SAFETY: When servicing machine, use cardboard to locate leaking hydraulic fluid under pressure.

High pressure fluid escaping from a very small hole can almost be invisible, and can cause serious injuries.

Consult a physician immediately if injury results from escaping hydraulic fluid. Serious infection or reaction can occur if proper medical treatment is not given immediately.

Contact a mechanic or supervisor if a leak is discovered.
ENGINE

FOR SAFETY: Before leaving or servicing machine, stop on level surface, set parking brake, turn off machine, and remove key.

COOLING SYSTEM

FOR SAFETY: When servicing machine, avoid contact with hot engine coolant. Do not remove cap from radiator when engine is hot. Allow engine to cool.

Check the coolant level in the reservoir daily. The coolant level must be between the indicator marks when the engine is cold. Refer to the coolant manufacture for water/coolant mixing instructions.

Flush the radiator and the cooling system after every 800 hours of operation.

The cooling system must be completely filled with coolant to keep the engine from overheating. When filling the cooling system, open the drain cocks to bleed the air from the system.

Location of drain cock on LPG machines for machines serial number 001499 and below.

Location of drain cock on gasoline machines for machines serial number 001500 and below. Remove the panel from operators compartment to access the drain cock.
Check the radiator hoses and clamps after every 200 hours of operation. Tighten loose clamps. Replace damaged hoses and clamps.

Check the radiator hoses for cracks and deterioration after every 1000 hours of operation.

Check the radiator core exterior and hydraulic cooler fins for debris after every 100 hours of operation. Blow or rinse all dust through the grille and radiator fins, in the opposite direction of normal air flow. Be careful to not bend the cooling fins when cleaning. Clean thoroughly to prevent the fins from becoming encrusted with dust. To avoid cracking the radiator, allow the radiator and cooler fins to cool before cleaning.

**AIR FILTER**

Replace the air filter after every 400 hours of operation.

**FUEL FILTER (LPG)**

Replace the LPG fuel filter after every 400 hours of operation.

Disassemble the fuel lock off valve to access the LPG fuel filter.

**FOR SAFETY:** When servicing machine, keep flames and sparks away from fuel system service area. Keep area well ventilated.
MAINTENANCE

ELECTRONIC PRESSURE REGULATOR (LPG)
(S/N 001500 – 004999)

Remove the sensor and drain the oil from the LPG electronic pressure regulator after every 100 hours of operation.

FOR SAFETY: When servicing machine, keep flames and sparks away from fuel system service area. Keep area well ventilated.

FUEL FILTER (Gasoline)

Replace the gasoline fuel filter after every 400 hours of operation.

FOR SAFETY: When servicing machine, keep flames and sparks away from fuel system service area. Keep area well ventilated.

Location of fuel filter on machines serial number 0014999 and below.

LPG VAPORIZER

Drain oil buildup in the LPG vaporizer after every 100 hours of operation.

FOR SAFETY: When servicing machine, keep flames and sparks away from fuel system service area. Keep area well ventilated.

Location of fuel filter on machines serial number 0015000 and above.
ENGINE BELT

Check the belt tension after every 50 hours of operation. Adjust tension as necessary. Proper belt tension is 13 mm (0.50 in) from a force of 4 to 5 kg (8 to 10 lb) applied at the mid-point of the longest span.

WARNING: Moving belt and fan. Keep away.

PCV SYSTEM

Inspect the PCV system after every 100 hours of operation.

SPARK PLUGS – GM ENGINES (S/N 000000 – 004999)

Clean or replace, and set the gap of the spark plugs after every 400 hours of operation. The proper spark plug gap is 1 mm (0.042 in).

SPARK PLUGS – MITSUBISHI ENGINES (S/N 005000 – )

Replace the spark plugs after every 1000 hours of operation.
MAINTENANCE

TIMING BELT – GM ENGINES
(S/N 000000 – 004999)
Check the timing belt after every 800 hours of operation.
Replace the timing belt after every 2000 hours of operation.

CAMSHAFT AND BALANCE SHAFT BELTS – MITSUBISHI ENGINES (S/N 005000 – )
Replace the camshaft and balance shaft belts after every 5000 hours of operation.

BATTERY
Clean and tighten the battery connections after the first 50 hours of operation and after every 800 hours after that. Do not remove the vent plugs from the battery or add water to the battery.

FOR SAFETY: When servicing machine, avoid contact with battery acid.

FUSES AND RELAYS

RELAY PANEL FUSES AND RELAYS
Fuses are one-time protection devices designed to protect the wire harness by stopping the flow of current in the event of a circuit overload. Relays switch the electrical power going to the machine electrical systems on/off. Remove the relay panel cover to access fuses and relays.

NOTE: Always replace a fuse with a fuse of the same amperage. Extra 15 Amp fuses are provided inside the relay panel drawer on the relay panel.

Refer to the diagram below for locations of the fuses and relays on the relay panel. The M10 relay for the optional spray nozzle is located behind the battery.
Refer to the table below for the fuses and circuits protected.

**ENGINE HARNESS FUSES AND RELAYS**

The engine harness fuses and relays are located in the fuse box inside the engine compartment. Refer to the fuse box cover for locations of engine harness fuses and relays.

**NOTE:** Always replace a fuse with a fuse of the same amperage.

**CIRCUIT BREAKERS (ec–H2O)**

Circuit breakers are resettable electrical circuit protection devices that stop the flow of current in the event of a circuit overload. Once a circuit breaker is tripped, allow breaker to cool and then press the reset button to manually reset the breaker.
MAINTENANCE

SCRUB BRUSHES AND PADS

The machine can be equipped with either disk or cylindrical scrub brushes, or cleaning pads. Check scrub brushes or pads daily for wire or string tangled around the brush or brush drive hub. Also check brushes or pads for damage and wear.

DISK BRUSHES

Replace the brushes when they no longer clean effectively.

Cleaning pads must be placed on pad drivers before they are ready to use. The cleaning pad is held in place the center disk.

Cleaning pads need to be cleaned immediately after use with soap and water. Do not wash the pads with a pressure washer. Hang pads, or lay pads flat to dry.

NOTE: Always replace brushes and pads in sets. Otherwise one brush or pad will be more aggressive than the other.

REPLACING DISK BRUSHES OR PAD DRIVER

1. Raise the scrub head.

FOR SAFETY: Before leaving or servicing machine, stop on level surface, set parking brake, turn off machine, and remove key.

2. Open the right outer brush door.

3. Hold down the release lever and rotate the adjustable disk brush head until it is possible to access the center brush.
4. Turn the brushes until the spring handles are visible.

5. Squeeze the spring handles and let the brushes drop to the floor.

6. Remove the brushes from underneath the scrub head.

7. Place the new brushes underneath the scrub head and lift each brush up onto the hub until the brush locks onto the hub.

8. Rotate the disk brush head back to the scrub position until the head locks into place.

9. Close the right outer brush door.

10. Open the left outer brush door and repeat the procedure for the left brush.

NOTE: The center brush can only be accessed from the right side of the machine.

REPLACING DISK PADS

FOR SAFETY: Before leaving or servicing machine, stop on level surface, set parking brake, turn off machine, and remove key.

1. Remove the pad driver from the machine.

2. Squeeze the spring clip together to remove the center disk.

3. Flip or replace the scrub pad, center the scrub pad on the pad driver. Then reinstall the center disk to secure the pad in place on the pad driver.

4. Reinsert the pad driver into the machine.
MAINTENANCE

CHECKING THE DISK SCRUB HEAD STOP BUMPERS

The disk scrub head stop bumpers keep the scrub head parallel with the floor when in the raised position. This protects the brushes when transporting. Check the lift stop bumpers after every 100 hours of operation for wear or damage.

1. Raise the scrub head.

FOR SAFETY: Before leaving or servicing machine, stop on level surface, set parking brake, turn off machine, and remove key.

2. Open the right and left outer brush doors.

3. Inspect the scrub head stop bumpers. Adjust the bumpers if the scrub head is not parallel with the floor. Replace worn or damaged bumpers.

CYLINDRICAL BRUSHES

FOR SAFETY: Before leaving or servicing machine, stop on level surface, set parking brake, turn off machine, and remove key.

Check the main brushes daily for tangled wire or string, wear, and damage.

Replace the brushes when they no longer clean effectively.

Rotate the brushes from front to rear after every 50 hours of machine operation for maximum brush life and best scrubbing performance.

NOTE: Replace brushes in sets of two. Otherwise one scrub brush may scrub more aggressively than the other.

REPLACING OR ROTATING CYLINDRICAL BRUSHES

The front brush can be accessed on the left side of the machine and rear brush can be accessed on the right side of the machine.

1. Raise the scrub head.

FOR SAFETY: Before leaving or servicing machine, stop on level surface, set parking brake, turn off machine, and remove key.

2. Open the outer brush doors.
3. Open the inner brush doors.

4. Remove the brush idler plates.

5. Pull the brushes out from the scrub head.

6. Install the new or rotated brushes by pushing down on the ends while sliding them onto the drive motor hubs.

7. If rotating the brushes, always rotate the front with the back so that they wear evenly. They may be rotated end–for–end as well.

8. Reinstall the brush idler plates.

9. Close the inner and outer brush doors.

10. Check the brush pattern and adjust if needed after rotating them. Refer to CHECKING AND ADJUSTING THE MAIN BRUSH PATTERN.

11. Check the brush pattern and adjust if needed after rotating them. Refer to CHECKING CYLINDRICAL BRUSH PATTERN.
MAINTENANCE

CHECKING CYLINDRICAL BRUSH PATTERN

1. Apply chalk, or a similar marking material, to a smooth and level section of the floor.

NOTE: If chalk or other material is not available, allow the brush to spin on the floor for two minutes. A polish mark will remain on the floor.

2. Raise the scrub head, then position the brushes over the chalked area.

3. Set the parking brake.

4. Press the 1–STEP Scrub button to lower the scrub head. Set the brush pressure to the lowest setting and allow the brushes to operate for 15 to 20 seconds. Keep the scrub head in one spot in the chalked area.

5. Raise the scrub head, release the parking brake, and drive the machine away from the chalked area.

FOR SAFETY: Before leaving or servicing machine, stop on level surface, set parking brake, turn off machine, and remove key.

6. Observe the brush patterns. If the brush pattern is the same width across the entire length of each brush and both brushes are the same width, no adjustment is necessary.

7. If the brush patterns are tapered, see ADJUSTING THE CYLINDRICAL BRUSH TAPER section of this manual.

8. The brush patterns should be 50 to 75 mm (2 to 3 in) wide with the brushes in the lowered position and both patterns should be the same width. If the width of the brushes is not the same, see ADJUSTING THE CYLINDRICAL BRUSH WIDTH section of this manual.
ADJUSTING THE CYLINDRICAL BRUSH TAPER

1. Loosen the four mounting bolts on the brush drive housing.

2. Move the brush drive housing up to decrease the pattern width on that side of the scrub head or down to increase the pattern width on that side of the scrub head.

3. Tighten the mounting bolts.

4. Recheck the pattern. Readjust if necessary.

ADJUSTING THE CYLINDRICAL BRUSH WIDTH

1. Adjust the length of the drag links on both sides of the scrub head. Lengthen the drag links to increase the rear brush pattern width. Shorten the drag links to increase the front brush pattern. Always adjust the nut on each drag link an equal number of turns.

NOTE: Two full turns of the drag link adjustment bolt will change the brush pattern approximately 25 mm (1 in).

2. Recheck the pattern. Readjust if necessary.
SIDE BRUSH (OPTION)

FOR SAFETY: Before leaving or servicing machine, stop on level surface, set parking brake, turn off machine, and remove key.

Check the side brush daily for wear or damage. Remove any tangled string or wire from the side brush or side brush drive hub.

REPLACING THE SIDE BRUSH

Replace the brush when it no longer cleans effectively or when the bristles are worn down to the yellow indicators.

1. If necessary, raise the side brush.
2. Turn the brush until the spring handles are visible through the access hole in the side brush assembly.
3. Squeeze the spring handles and let the side brush drop to the floor.
4. Remove the side brush from underneath the side brush assembly.
5. Set the brush spring open on the new brush to make installation easier.
6. Place the new side brush underneath the side brush assembly and lift the side brush up onto the side brush hub until the brush locks onto the hub.
FaST SYSTEM

REPLACING THE FaST–PAK CARTON

FOR SAFETY: Before leaving or servicing machine, stop on level surface, set parking brake, turn off machine, and remove key.

1. Open the side access door.

2. Slide the seat completely forward.

3. Squeeze the button on the FaST supply hose connector, then pull the empty FaST–PAK carton out from the compartment and discard.

4. Remove the perforated knock outs from the new FaST–PAK carton. Do Not remove the bag from the carton. Pull out the hose connector located on the bottom of the bag and remove the hose cap from the connector.

NOTE: The FaST–PAK Floor Cleaning Concentrate is specially designed for use with the FaST system scrubbing application. NEVER use a substitute. Other cleaning solutions may cause FaST system failure.

5. Slide the FaST–PAK carton into the FaST–PAK bracket.

6. Connect the FaST supply hose to the FaST–PAK hose connector.

7. Scrub with the FaST system for a few minutes to allow the detergent to reach maximum foaming.
MAINTENANCE

CLEANING THE FaST SUPPLY HOSE CONNECTOR

Soak the connector in warm water if detergent buildup is visible. When a FaST–PAK carton is not installed, store the supply hose connector on the storing plug to prevent the hose from clogging.

CLEANING THE FaST SYSTEM FILTER SCREEN

The FaST system filter screen filters water from the solution tank as the water flows into the FaST system.

Remove the filter screen bowl and clean the filter screen after every 50 hours of operation. Empty the solution tank before removing the filter.

CLEANING THE FaST SYSTEM AIR PUMP FILTER (S/N 000000 – 001742)

Remove and clean the air filter with compressed air after every 200 hours of FaST scrubbing.

REPLACING THE FaST SYSTEM FILTERS (S/N 001743– )

Replace the FaST system filters after every 1000 hours of operation. Empty the solution tank before replacing the filters.
**ec−H2O MODULE FLUSH PROCEDURE**

This procedure is only required when an alarm sounds and the ec−H2O system indicator light begins to blink red.

FOR SAFETY: Before leaving or servicing machine, stop on level surface, set parking brake, turn off machine.

1. Remove both flush hoses from the storage bag located behind the operator seat.

2. Lock the operator seat cover open.

3. Disconnect the ec−H2O system intake hose from the solution supply hose and connect the intake flush hose (gray connector) to the ec−H2O system intake hose.

4. Disconnect the ec−H2O system outlet hose from the hose to the scrub head and connect the outlet flush hose (black connector) to the ec−H2O system outlet hose.

5. Place the ec−H2O system intake hose into a container containing 5 gallons (19 liters) of white or rice vinegar. Place the outlet hose into an empty bucket.

6. Turn the key to the on position without starting the engine.

7. Press and release the ec−H2O module flush switch to start the flush cycle.

**NOTE:** The module will automatically shut off when the flush cycle is complete (approx. 7 minutes). The module must run the full 7 minute cycle in order to reset the system indicator light and alarm.
8. After the 7 minute flush cycle, remove the siphon hose from the container of vinegar and place the siphon hose into a container of cool clean water. Press the flush switch again to rinse out any remaining vinegar from the module. After 1–2 minutes, press the flush switch to turn off the module.

9. Disconnect the flush hoses from the ec-H2O system intake hose and outlet hose and return the flush hoses to the storage bag.

10. Reconnect ec-H2O intake and outlet hoses. If the ec-H2O system indicator light continues to flash, repeat the flush procedure. If the problem persists, contact an Authorized Service Center.

11. Insert the outlet and intake hoses between the ec-H2O assembly and the bracket.

NOTE: The outlet and intake hoses must be down between the ec-H2O assembly and the bracket so they are not pinched or damaged when the operator seat cover is closed.

12. Close the operator seat cover.

CLEANING THE ec-H2O FILTER SCREEN

Remove and clean the ec-H2O filter screen after every 50 hours of operation.
SQUEEGEE BLADES

Check the squeegee blades for damage and wear daily. When the blades become worn, rotate the blades end–for–end or top–to–bottom to a new wiping edge. Replace blades when all edges are worn.

Check the deflection of the squeegee blades daily or when scrubbing a different type of surface. Check the leveling of the rear squeegee every 100 hours of operation.

REPLACING (OR ROTATING) THE REAR SQUEEGEE BLADES

1. Lower the scrub head.

FOR SAFETY: Before leaving or servicing machine, stop on level surface, set parking brake, and turn off machine.

2. Disconnect the vacuum hose from the rear squeegee assembly.

3. Remove both mounting knobs from the rear squeegee assembly.

4. Turn on the machine, raise the scrub head, and turn off the machine.

5. Remove the rear squeegee assembly from the machine.

6. Loosen the rear retaining band tension latch and open the retaining band.

7. Remove the rear squeegee.
8. Install the new rear squeegee blade or rotate the existing blade to the new edge. Be sure all the holes in the squeegee blade are hooked onto the tabs.

9. Reinstall the rear retaining band aligning the tabs with the holes.

10. Tighten the rear retaining band tension latch.

11. Loosen the front retaining band tension latch and open the retaining band.

12. Remove the front squeegee.

13. Install the new front squeegee blade or rotate the existing blade to the new edge. Be sure the holes in the squeegee blade are hooked onto the tabs.
14. Reinstall the front retaining band aligning the tabs with the notches.

15. Tighten the front retaining band tension latch.

16. Reinstall the rear squeegee assembly onto the machine.

17. Check and adjust the rear squeegee if necessary. Refer to ADJUSTING THE REAR SQUEEGEE BLADE DEFLECTION and LEVELING THE REAR SQUEEGEE sections of this manual.

REPLACING OR ROTATING THE SIDE SQUEEGEE BLADES

1. If necessary, raise the scrub head.

FOR SAFETY: Before leaving or servicing machine, stop on level surface, set parking brake, turn off machine, and remove key.

2. Open the outer brush doors.

3. Unhook the latch on the side squeegee retaining band from the side squeegee assembly.

4. Remove the retaining band from the side squeegee assembly.
5. Remove the side squeegee blade. If the outer edge of the squeegee blade is not worn, rotate the squeegee blade with the blade from the other side of the machine. Discard the squeegee blade if both edges are worn.

8. Hook the latch on the side squeegee retaining band.

9. Close the outer brush door.

6. Install the new or rotated squeegee blades.

7. Reattach the side squeegee retaining band to the side squeegee assembly.
REPLACING THE SIDE BRUSH SQUEEGEE BLADE (S/N 000000–002115) (OPTION)

Check the side brush squeegee blade for damage and wear daily. Replace the blade if the leading edge is torn or worn half-way through the thickness of the blade.

1. If necessary, raise the scrub head.

FOR SAFETY: Before leaving or servicing machine, stop on level surface, set parking brake, turn off machine and remove key.

2. Pull the pin from the squeegee bumper and open the squeegee bumper.

3. Remove the clevis pin and squeegee retainer.

4. Pull the squeegee out from the side brush assembly.

5. Slide the new squeegee into the side brush assembly.

6. Reinstall the squeegee retainer and clevis pin.

7. Close the squeegee bumper and reinsert the pin.
REPLACING OR ADJUSTING THE SIDE BRUSH SQUEEGEE BLADE (S/N 002116–
(OPTION)

FOR SAFETY: Before leaving or servicing machine, stop on level surface, set parking brake, turn off machine, and remove key.

Check the side brush squeegee blade for damage and wear daily. Replace the blade if the leading edge is torn or worn half-way through the thickness of the blade.

1. Lower the scrub head.
2. Pull the pins and remove the squeegee bumper.
3. Open the retaining band tension latch.
4. Remove the squeegees, spacer, and retainer from the squeegee bumper.

NOTE: The side brush squeegee blades have different holes for changing height adjustment.
5. Reinstall the squeegees, spacer, and retainer to the squeegee bumper by aligning the appropriate holes to the pins on the bumper.
6. Reinstall the retaining band tension latch.
7. Reinstall the squeegee bumper and reinsert the pins.
LEVELING THE REAR SQUEEGEE

Leveling the squeegee assures the entire length of the squeegee blade is in even contact with the surface being scrubbed. Perform this adjustment on an even and level floor.

1. Lower the squeegee and drive the machine forward a few meters (feet).

FOR SAFETY: Before leaving or servicing machine, stop on level surface, set parking brake, turn off machine, and remove key.

2. Look at the deflection of the squeegee over the full length of the squeegee blade.

3. If the deflection is not the same over the full length of the blade, turn the squeegee levelling nut to make adjustments.

DO NOT disconnect the suction hose from the squeegee frame when leveling squeegee.

4. Turn the squeegee leveling nut counter-clockwise to decrease the deflection at the ends of the squeegee blade.

Turn the squeegee leveling nut clockwise to increase the deflection at the ends of the squeegee blade.

5. Drive the machine forward with the squeegee down to recheck the squeegee blade deflection if adjustments were made.

6. Readjust the squeegee blade deflection if necessary.
ADJUSTING THE REAR SQUEEGEE BLADE DEFLECTION

Deflection is the amount of curl the overall squeegee blade has when the machine moves forward. The best deflection is when the squeegee wipes the floor dry with a minimal amount of deflection.

NOTE: Make sure the squeegee is level before adjusting the deflection. See LEVELING THE REAR SQUEEGEE.

1. Lower the squeegee and drive the machine forward a few meters (feet).

FOR SAFETY: Before leaving or servicing machine, stop on level surface, set parking brake, turn off machine, and remove key.

2. Look at the amount of deflection or “curl” of the squeegee blade. The correct amount of deflection is 12 mm (0.50 in) for scrubbing smooth floors and 15 mm (0.62 in) for rough floors.

3. To adjust the overall squeegee blade deflection, turn the adjustment knobs counterclockwise to increase deflection or clockwise to decrease deflection.

4. Drive the machine forward again to recheck the squeegee blade deflection after adjustments are made.

5. Readjust the squeegee blade deflection if necessary.
SKIRTS AND SEALS

FOR SAFETY: Before leaving or servicing machine, stop on level surface, set parking brake, turn off machine, and remove key.

SCRUB HEAD SKIRT

Check the skirt for damage and wear after every 100 hours of operation.

The skirts should be between 0 to 6 mm (0 to 0.25 in) from the floor when the scrub head is down.

RECOVERY TANK SEAL

Check the recovery tank cover seal for damage and wear daily.

SOLUTION TANK SEALS

Check each solution tank cover seal for damage and wear daily.
MAINTENANCE

BRAKES AND TIRES

BRAKES

The mechanical brakes are located on the rear wheels. The brakes are operated by the foot brake pedal and connecting cables.

Check the brake adjustment after every 200 hours of operation.

To check the brake adjustment, measure the distance from the stationary brake pedal to the point where there is resistance in the pedal movement. The distance must be between 6 mm (0.25 in) and 19 mm (0.75 in). Adjust the brakes if required.

TIRES

Check tires for damage and wear after every 100 hours of operation.

FRONT WHEEL

Torque the front wheel nuts twice in the pattern shown to 122 to 149 Nm (90 to 110 ft lb) after the first 50 hours of operation, and after every 800 hours there after.

PROPELLING MOTOR

Torque the shaft nut to 508 Nm (375 ft lb) lubricated, 644 Nm (475 ft lb) dry, after every 800 hours of operation.
PUSHING, TOWING, AND TRANSPORTING THE MACHINE

PUSHING OR TOWING THE MACHINE

If the machine becomes disabled, it can be pushed from the front or rear, but only towed from the front.

The propelling pump has a bypass valve to prevent damage to the hydraulic system when the machine is being pushed or towed. This valve allows a disabled machine to be moved for a short distance and at a speed to not exceed 1.6 kp/h (1 mph). The machine is NOT intended to be pushed or towed a long distance or at a high speed.

ATTENTION! Do not push or tow machine for a long distance or damage may occur to the propelling system.

Turn the bypass valve located on the bottom of the propelling pump 90° (either direction) from the normal position before pushing or towing the machine. Return the bypass valve back to the normal position when through pushing or towing the machine. Do Not use the bypass valve during normal machine operation.

TRANSPORTING THE MACHINE

1. Raise the squeegee, scrub head, and brushes.

FOR SAFETY: When loading machine onto truck or trailer, drain tanks before loading machine.

2. Position the rear of the machine at the loading edge of the truck or trailer.

3. If the loading surface is not horizontal or is higher than 380 mm (15 in) from the ground, use a winch to load machine.

   If the loading surface is horizontal and 380 mm (15 in) or less from the ground, the machine may be driven onto the truck or trailer.

   FOR SAFETY: When loading machine onto truck or trailer, use winch. Do not drive the machine onto the truck or trailer unless the loading surface is horizontal AND is 380 mm (15 in) or less from the ground.

4. To winch the machine onto the truck or trailer, attach the winching chains to the holes in the rear jacking brackets behind the rear tires.
5. Position the machine as close to the front of the trailer or truck as possible.

6. Set the parking brake and place a block behind each wheel to prevent the machine from rolling.

7. Lower the scrub head.

FOR SAFETY: When loading/unloading machine onto/off truck or trailer, lower scrub head and squeegee before tying down machine.

8. Connect the tie-down straps to the holes in the right and left lower corners in front of the machine and the holes in the rear jacking brackets behind the rear tires.

9. Route the tie-downs to the opposite ends of the machine and hook them to the brackets on the floor of the trailer or truck. Tighten the tie-down straps.

NOTE: It may be necessary to install tie-down brackets to the floor of the trailer or truck.

10. If the loading surface is not horizontal or is higher than 380 mm (15 in) from the ground, use a winch to unload machine.

   If the loading surface is horizontal AND is 380 mm (15 in) or less from the ground, the machine may be driven off the truck or trailer.

   FOR SAFETY: When unloading machine off truck or trailer, use winch. Do not drive the machine off the truck or trailer unless the loading surface is horizontal AND 380 mm (15 in) or less from the ground.
MACHINE JACKING

Empty the debris tray, recovery tank, and solution tank before jacking up the machine. Jack up the machine at the designated locations. Use a hoist or jack capable of supporting the weight of the machine. Use jackstands to support the machine. Always stop the machine on a flat, level surface and block the tires before jacking up the machine.

Rear jacking locations are located directly behind the rear tires on each side of the machine.

Front jacking locations are located on the frame directly in front of the front tire.

FOR SAFETY: Before leaving or servicing machine, stop on level surface, set parking brake, turn off machine, and remove key.

FOR SAFETY: When servicing machine, block machine tires before jacking machine up. Use a hoist or jack that will support the weight of the machine. Jack machine up at designated locations only. Support machine with jack stands.

STORAGE INFORMATION

The following steps should be taken prior to storing the machine for extended periods.

1. Drain and clean the solution and recovery tanks. Open the recovery tank and solution tank covers to allow the air to circulate.

2. Park the machine in a cool, dry area. Do not expose the machine to rain. Store indoors.

3. Remove the battery, or charge battery every three months.
MAINTENANCE

FREEZE PROTECTION (MACHINES WITHOUT ec–H2O SYSTEM)

FOR SAFETY: Before leaving or servicing machine, stop on level surface, set parking brake, and turn off machine.

1. Be sure the solution tank and recovery tank are empty.
2. Pour 3.8 L (1 gal) of Propylene Glycol Based / Recreational Vehicle (RV) Antifreeze into the solution tank.
3. Turn the key to the on position (without starting the machine).
4. Press the 1–STEP Scrub button.
5. Repeatedly press the Solution increase button (+) until the solution flow is at the highest setting.
6. Press the directional pedal to circulate the RV antifreeze completely through the system.
7. Press the 1–STEP Scrub button to turn off the system.
8. Machines equipped with the optional spray nozzle only: Turn on the pump until RV antifreeze solution sprays from the nozzle.
9. Turn the key to the off position.
10. The remaining RV antifreeze does not need to be drained from the solution tank.

NOTE: Storing or transporting machines equipped with the ES or the FaST system in freezing temperatures requires special procedures. Consult a TENNANT representative for more information.

FREEZE PROTECTION (MACHINES WITH ec–H2O SYSTEM)

FOR SAFETY: Before leaving or servicing machine, stop on level surface, set parking brake, and turn off machine.

1. Empty the solution tank and recovery tank.
2. Remove the intake flush hose and from the storage bag behind the operator seat.
3. Disconnect the ec–H2O system intake hose from the solution supply hose and connect the intake flush hose (gray connector) to the ec–H2O system intake hose.
4. Pull the drain tube from the between the ec–H2O unit and the operator compartment, remove the cap from the tube, and place the end of the tube into an empty container. Set the cap aside.
5. Turn the key to the on position (without starting the machine).

6. Press and release the ec–H2O module flush switch. Allow the system to drain water into the container for 2 minutes.

7. Press the ec–H2O module flush switch to shut off the system.

8. Disconnect the ec–H2O system outlet hose from the hose to the scrub head.

9. Blow pressurized air (less than 344 kPa (50 psi)) into the ec–H2O system outlet hose. Continue blowing compressed air into the outlet hose until water no longer drains from the drain tube.

10. Reinstall the cap onto the drain tube and insert the tube back between the ec–H2O module and the operator compartment.

11. Reconnect the ec–H2O system intake hose to the solution supply hose and the ec–H2O system outlet hose to the hose to the scrub head.

12. Insert the intake and outlet hoses down between the ec–H2O assembly and the bracket.

13. Return the intake flush hose to the storage bag behind the operator seat.
PRIMING THE \textit{ec–H2O} SYSTEM

Prime the \textit{ec–H2O} system if the machine has been stored for a long period without water in the solution tank / \textit{ec–H2O} system.

\textbf{FOR SAFETY:} Before leaving or servicing machine, stop on level surface, set parking brake, and turn off machine.

1. Fill the solution tank with clean cool water. See \textit{FILLING THE SOLUTION TANK} section of this manual.

2. Remove the outlet flush hose (black connector) from the storage bag behind the operator seat.

3. Disconnect the \textit{ec–H2O} system outlet hose from the hose to the scrub head and connect the outlet flush hose to the \textit{ec–H2O} system outlet hose.

4. Place the \textit{ec–H2O} system outlet hose into an empty container.

5. Turn the key to the on position (\textbf{without starting the machine}).

6. Press and release the \textit{ec–H2O} module flush switch. Allow the system to drain water into the container for 2 minutes.

7. Press the \textit{ec–H2O} module flush switch to shut off the system.

8. Disconnect the outlet flush hose from the \textit{ec–H2O} system outlet hose and return the flush hose to the storage bag.

9. Reconnect the \textit{ec–H2O} system outlet hose to the hose to the scrub head.
