

# CREATE CLEANER, SAFER, MORE ATTRACTIVE CONCRETE FLOORS

## FINISHED CONCRETE SYSTEMS FROM TENNANT

Finished Concrete Systems from Tennant provide smoother, brighter concrete floors that improve light reflectivity and enhance the image of your facility.

Tennant offers three unique, end-to-end systems for restoring, finishing, and maintaining concrete spaces:

- The **Easy Prep Process** uses your Tennant machine, equipped with diamond grit tools, to quickly and easily prepare concrete floors for renewed life with Tennant floor coatings.
- The **Aggressive Scrub Process** allows your Tennant scrubber with Diamabrush™ tools to remove heavy to severe soil that is compacted into the concrete surface.
- The **Polished Concrete Process** hones concrete surfaces to a progressively smoother, shinier and brighter finish.

## THE KEY TO SUCCESS—TENNANT EQUIPMENT AND DIAMABRUSH TOOLS

Tennant scrubbers have best-in-class water pickup and down pressure, and Diamabrush tools are designed to continuously expose diamonds to retain sharp edges and maintain floor contact. The result is better looking floors that are easier to clean and maintain.

## COMPLETE SYSTEMS. CLEAR ADVANTAGES.

### Clean Floors ■ High Reflectivity ■ Consistent Image ■ Dust Control

With innovative systems from Tennant, you can improve and maintain the appearance of your facilities. They offer you:

- Up to 5 times more cost effective than planetary grinding
- A simpler and more operator-friendly way to prepare concrete floors for coatings
- A more productive process for removing build-up—5 to 10 times faster than abrasive brushes
- The ability to do the work yourself with minimal training or business disruption
- More sustainable systems than traditional processes
